

SOPHOS

Sophos Endpoint Protection

Comprehensive protection for servers and laptops across multiple platforms

SOPHOS ENDPOINT SECURITY AND CONTROL

CENTRAL MANAGEMENT

- » Centrally monitor and manage Windows, Mac, Unix, and Linux systems from a single interface
- » Remotely install and update Anti-Virus and Client Firewall
- » At-a-glance view of security status across all computers on the network
- » Enables streamlined policy creation and enforcement with Sophos ActivePolicies™
- » Find computers via network find, IP/subnet, and Microsoft Active Directory, to ensure consistent and rapid deployment
- » Synchronize with Active Directory to ensure that new computers are automatically protected and security policies are applied and enforced

CLIENT FIREWALL

- » Specifically designed for use within business IT departments
- » Endpoints are protected from known and unknown threats, including worms and hackers, with technologies like port blocking
- » Highly customizable, very robust and location-aware
- » Enables security administrators to simultaneously protect desktops, laptops and roaming users
- » Proactive to protect against application hijacking and impersonation
- » Intrusion prevented by hiding endpoints from hackers

ANTI-VIRUS

- » Fast and low-impact to enduser systems, enabling updates to be checked for, downloaded and installed every 5 minutes without negatively affecting client performance
- » Decision Caching™ technology intercepts and scans only files that have changed since they were last accessed, improving the performance of endpoint scans
- » SophosLabs™, a global network of researchers that leverage detection technologies to identify threats and protect businesses from emerging threats before they infect end-users use spam traps, unprotected computers, and relationships with search engines, to continuously identify, analyze, and combat malware and data leakage threats

NETWORK ACCESS CONTROL

- » Built right into the product, doesn't require additional licenses or add-ons
- » Assesses endpoint health to determine if device should be allowed to access the network
- » Already setup with default policies to check if the endpoint system's anti-virus is enabled and firewall protection is active and up-to-date, and whether the machine is centrally managed with Sophos or not
- » Agent can check and see if the client's Windows operating system has required service packs installed, and Microsoft/Windows Update enabled as a requirement

ENDPOINT SECURITY AND DATA PROTECTION

Sophos Endpoint Security and Data Protection includes all the features in Sophos Endpoint Security and Control, but adds a layer of data protection with the additional features listed below.

DEVICE & PORT CONTROL

- » Ensures consistent security policies by extending enforcement to removable storage devices
- » Simplifies device control deployment, with integration into unified detection engine
- » Eliminates need for additional point products
- » Establish different policies for different groups
- » Granular visibility of PC ports, including FireWire, PCMCIA, Wi-Fi, and USB
- » Tamper-resistant and virtually impossible to circumvent, disable, or uninstall

APPLICATION CONTROL

- » Prevent and control usage of authorized and unauthorized software like: file sharing, tool bars, instant messaging, distributed computing, games, Voice over IP, and other PUAs (potentially-unwanted applications)
- » Reduces security, legal, support and productivity risks
- » Allow different policies for different groups
- » Database of applications kept up to date by SophosLabs for new applications and write detections
- » Expands to control good software in addition to bad software
- » Integrates with unified detection engine

SAFE GUARD DISK ENCRYPTION

- » Protect against data leakages that occur with a full disk encryption solution
- » Pre-boot authentication for full protection of files on hard disks
- » Configured via a wizard for easy implementation and enforcement, integrating with your existing data security policy
- » Installation can be pushed out throughout the network via the deployment tool, and requires no user intervention
- » Users can continue to work during the initial encryption task
- » No training for end-users is needed, and no impact on day-to-day productivity
- » Users are not required to provide another login when starting up their PCs, using a single sign-on to the operating system to provide access to data
- » When users forget their password, there is a recovery process that administrators can utilize to retrieve and reset passwords without having to reformat the entire disk.

A VALUED PARTNER

As a Sophos partner, North American Systems is qualified to provide the full range of their security products. Our extensive experience in the IT industry lead us to partner with Sophos because:

- » the 24x7 technical support that comes standard with their products puts you in contact with an actual Sophos employee at the first point of contact
- » simplified licensing bundles a number of features into a single product, eliminating the need to purchase point products to address various security holes
- » their product enables seamless management of security across multiple platforms and operating systems from a single interface

Contact us to find out more; we can help you size and price out a security solution that fits your needs, and help you can migrate to this new product with minimal disruption.
